

Zipeng MA

Personal Information

Address: Economics Department, ESSEC Business School, 5 Nepal Park, Singapore, 139408

Email : zipeng.ma@essec.edu; mzp097@gmail.com Phone: +86 18805188322; +65(0) 80681352

Personal Website: <https://zipengmarkma.github.io/>

Education

- **ESSEC Business School - CY Cergy Paris Université (THEMA)** *Paris*
PhD. Business Administration (Economic Concentration), 2026 (*estimated*)
Supervisor: Prof. Jamus Lim
- **University of California, DAVIS** *Davis, CA*
Visiting Scholar, Feb - July 2024
Host supervisor: Prof. Kathryn Russ
- **ESSEC Business School (Singapore Campus)** *Singapore*
Visiting Scholar, Jan - July 2023
- **University College London** *London*
MSc. Economics and Policy of Energy and Environment, 2020
Advisor: Prof. Paolo Agnolucci
- **University of Birmingham** *Birmingham*
BSc. Money Banking and Finance, 2019
Tutor: Prof. Alessandra Guariglia
- **York University** *Toronto*
Exchange with scholarship from Chinese government, Summer 2016

Experience

Research experience

- The reverse China shock on innovations and spillover: evidence from manufacturing industries. Zipeng MA; 2025 (*Job Market Paper*)
China Syndrome has been a popular topic during the past decade. Most of the research focuses on the impacts of China's import competition on developed countries, especially on the labor market. Only a few of them take a flipping point of view and examine how this demand shock changed China. A model showing relationship between regional innovations and exports is developed based on individual firms' choices. Then in empirical section, we adopt a new IV to investigate how trade affects patents and innovations from a broader perspective in manufacturing sectors from 1998 to 2015, with a DDML robustness check. Then we show that higher trade exposure in the city leads to higher authorized innovations, and the knowledge intensity usually has spatial spillover effects on the cities nearby. Contrary to common beliefs, although human capital plays an important role in innovations, the channels through which it affects patents in China differ from those in other developed countries. Unlike human capital, physical capital does not significantly affect Chinese regional innovations.
- The reverse China shock: the factor responses to China trade liberalization. Zipeng MA, Jamus Lim; 2023 (*Working Paper*)
This paper focuses on the impacts of international trade and increasing export on the Chinese labor market in the Manufacturing sectors from 1997 to 2009, investigating the market variation including the inequality based on sectorial capital intensity, and high-educated worker intensity. Two different identification strategies including IV and Fussy-DiD are implemented to clearly identify the causality. Also, exploiting the Heckscher-Olin model and Skill-biased technological change (SBTC) using Quantile regression and Moderating effect. Rising export exposure

will lead to higher employment as well as higher salaries. Considered as a labor-abundant country, China have higher employment in labor-intensive sectors after soar in export according to H-O model, but High-skill (high-education) worker-intensive sectors will have higher employment following SBTC.

- “China Syndrome” in Aid? The trade effects of Chinese foreign aid and firm-level innovation networks. Zipeng MA, [Wentao Li](#); (*In Progress; drafts coming soon*)
- Cai, B., Guo, H., **Ma, Z.**, Wang, Z., Dhakal, S. and Cao, L., 2019. Benchmarking carbon emissions efficiency in Chinese cities: A comparative study based on high-resolution gridded data. *Applied energy*, 242, pp.994-1009 [\[Link\]](#)
Comprehensive and accurate city-level carbon dioxide emissions inventory is key to success in China’s pursuit of low-carbon development. Based on a high-resolution gridded data, this paper evaluates and benchmarks the carbon emissions efficiency of 280 Chinese cities using three different methods, i.e., composite index, data envelopment analysis and stochastic frontier analysis. The comparative analysis reveals that the average carbon emissions efficiency of Chinese cities is about 70–90%, with only 9 efficient cities (3%). Although the ranking of intermediate cities varies greatly according to the method employed, the most and least carbon-efficient cities remain consistent. While the best-performing cities are found in the coastal regions, the worst-performing cities are located in the central and western regions, which suggests an imbalanced low-carbon development in China. Guided by the results, local governments are encouraged to compete and learn from similar ranking benchmarks in a new regime of “Top Runner City”. Finally, the scores of carbon emissions efficiency can provide a scientific basis for the bottom-up allocation of carbon emissions rights to boost the development of the nationwide carbon market in China.

Conference and Invited Presentations

Econometric Society, 2026 Asia Meeting (Main) – Abu Dhabi (*upcoming*)

The Japan Economic Policy Association, 2025 Nagoya (*upcoming*)

Teaching experience and Assistants

Lecturer: Microeconomics (Bachelor)

Lecturer: Macroeconomics (Bachelor)

Lecturer: Refresh for Microeconomics (Master)

Lecturer: Business Games Simulation (Bachelor)

Teaching Assistant: International Economics

Teaching Assistant: Asia Economics

Work experience - Internship

People’s Bank of China, Central Bank

Intern, Department of Monetary Credit & Statistics

Bank of China, Head office of Jiangsu province

Intern, Department of Trading Finance

Scholarships and Certificates

Full Scholarship from ESSEC Business School for Ph.D. students

Aide à la Mobilité Internationale du Collège Doctoral - CY Cergy Paris Université

Scholarship for Business school students at University of Birmingham

'Provincial Government Scholarship of Overseas Studies for Undergraduates' in China

First Class Academic Scholarship from Nanjing Audit University

Additions

Language: Chinese Mandarin (Native); English (Professional); French (Intermediate)

Chief player of Nationality philharmonic orchestra in Nanjing Audit University
